

# PORTFOLIO MAPPING TOOL

ACTION CATALYST TOOLS

## 1 RELATE

COMMITMENT

Progression through this phase is marked by a personal commitment to follow through on VMMC. For a commitment to be established a man must move beyond simple awareness of information about VMMC. He must internalize the value VMMC may provide for himself (and his family) and determine that this value is necessary to obtain. Awareness of VMMC is assumed to have already been established prior to this phase. The interim milestones are: Awareness and Understanding.

## 2 ANTICIPATE

PROCEDURE

Progression in this phase is marked by evolution from the INTENTION to follow through on VMMC, to the scheduling of the procedure, through to final ACTION / completion of the surgery. The interim milestone is: Scheduling.

## 3 RELIEVE

ADVOCATE

A man in the relieve phase has completed the VMMC procedure and experiences a lifting of the intense pre-operation pressures and post-operation concerns.

LACK OF BENEFIT RELEVANCE

ANTICIPATED PAIN

ANTICIPATED LOSS

DISTRUST

UNCERTAINTY

ANTICIPATED SHAME

Protection from STIs	Protection from HIV	Protects partner from HPV or STIs
Believe there is no risk in monogamy	Improved perception by women	Sex lasts longer
Improved hygiene		
Anticipated pain of procedure		
Anticipated loss of wages	Anticipated loss of religious alignment	
Distrust of men under-representing pain	Distrust of woman's intent making request	
Uncertainty of procedure steps & timelines		

Protection from STIs	Protects the community	Believe there is no risk in monogamy	Improved perception by women
Improved hygiene			
Anticipated pain of procedure	Anticipated pain of healing
