

Small country group activity

Country Action Planning

Participants will work in small groups, by country, to develop an Action Plan for the initial steps towards quality assurance for MC / HIV prevention when they return to their countries, including identifying key stakeholders, building a team and gathering support.

Also, identify the next steps that will facilitate the implementation of the action plan, including:

- Partnership
- Technical assistance
- Financial support

Discuss:

1. The significance and relevance of the QA to the current country situation.
2. The type of individuals (managers, policy makers, service providers), and institutions that can benefit from being informed and participating
 - a) How to involve relevant people and institutions
3. The process of incorporating the QA for MC, if QI work already exists /underway in country OR if it does not.
