MALE CIRCUMCISION

Key elements of Lihawu Camp

MC

MALE CIRCUMCISION

Lihawu Camps

- 450 (15-29 years) clients, recruited out-of-school, attended 19 Camps between April and November 2016 (target: 500 - 90%)
- 348 (77%) were eligible for circumcision and 353 (79%) undertook HTC.
- 269 circumcisions took place (77% of eligible clients, 60% of total)

MC

MALE CIRCUMCISION

Lihawu Package

- 380/450 (85%) successfully demonstrated effective condom usage on exit
- 357/450 (79%) successfully demonstrated effective post-MC care and conduct on exit.
- At 6-weeks post-Camp, FGDs and individual participant data collection was conducted with 58 participants from several communities.
- 50/58 of clients interviewed still knew their HIV status.
- 50/58 of clients knew how to correctly use a condom.
- 43/56 reported that that circumcision was not as painful as they thought it would be
- 42/58 participants Strongly Agreed that Lihawu Male Mentoring Camp had a lasting impact on their everyday lifestyle and behaviour.
