Global HIV Prevention Coalition

# New HIV infections among adults (15+ years), globally, 2010–2017 and 2020 target

Source: UNAIDS Global AIDS Update, 2018.

\* The 2020 target is fewer than 500 000 new infections, equivalent to a 75% reduction since 2010

## Four main reasons for insufficient scale-up

- Gaps in political leadership for prevention
- Policy barriers
- Gaps in HIV prevention financing
- Lack of systematic prevention implementation at scale

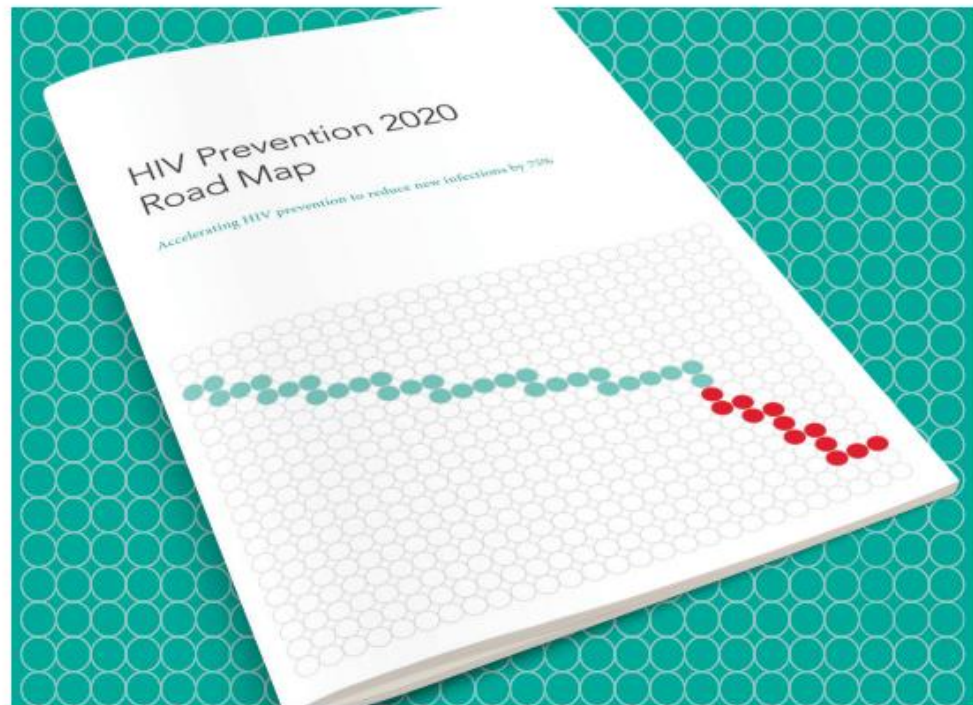

# Implementation of the HIV Prevention 2020 Road Map

First progress report, March 2018

## HIV Prevention 2020 Roadmap

-

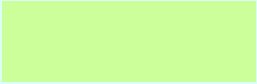

## 1st Progress Report

# Examples and Overview of Prevention Programmes

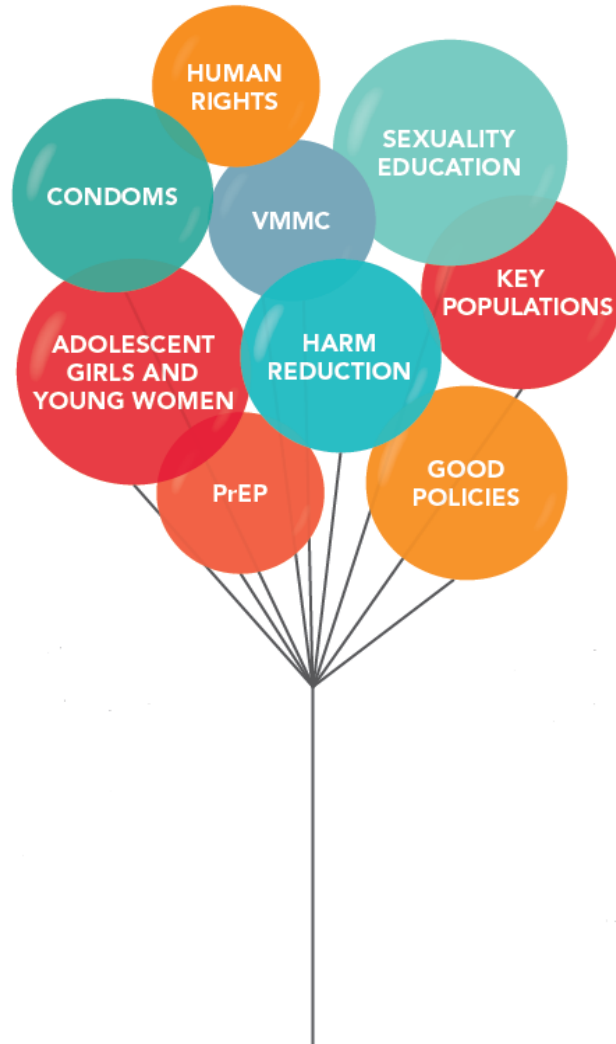

## Scores in Global Prevention Coalition Countries

	<b>Very good</b>	VMMC in Eastern African Countries, PrEP preparedness and roll out in Brazil, Kenya, South Africa
	<b>Good</b>	Key populations programmes in India PWID and sex worker programmes in Ukraine Sex worker programme in Cote d'Ivoire Condom programmes in Lesotho, Namibia, South Africa, Zimbabwe PrEP preparedness in Mexico and some other countries
	<b>Moderate</b>	Sex worker and VMMC programmes in some countries
	<b>Low</b>	Most programmes with adolescent girls programmes, Several VMMC programmes in Southern Africa
	<b>Very low</b>	Most key population programmes Many condom programmes
	<b>Insufficient Data</b>	Most programmes with men who have sex with men, Some condom programmes, Some adolescent girls and young women programmes
