

THE STATE OF HIV PREVENTION IN CÔTE D'IVOIRE 2020

The number of adults newly infected with HIV declined from 20000 in 2010 to 10000 in 2019, a 49% decline.

Policy and structural barriers

Key populations

Barrier	Sex workers	Gay men & other men who have sex with men	People who inject drugs
Criminalization of the behaviour of key populations	Partial	No	Yes
The national strategy includes critical elements of the programme package for key populations	All	All	Some
Avoided health care because of stigma and discrimination	23%	22%	id

Adolescent girls and young women

Indicator	15-19 years	15-49 years
Proportion of women who experienced intimate partner violence	id	31%
Girls who completed lower secondary education	28%	
Policies on life skills-based HIV and sexuality education (secondary schools)	Yes	
Laws requiring parental consent for adolescents to access sexual and reproductive health services	No	

HIV prevention adaptations during COVID-19

Adaptation	Safe continuation of outreach	Online counselling
Young women	Yes	Yes
Key populations	No	Yes
Adopted multi-month dispensing	Yes	Expanded alternative access
Condoms	Yes	Yes
PrEP	Yes	No
HIV treatment	Yes	Yes
Safe injecting equipment	No	
Opioid substitution therapy (take home dosages)		No

Note: 'Yes' refers to the adaptation having been introduced (not necessarily it being universally available).

Linkages between HIV and sexual and reproductive health services

HIV testing services integrated within sexual and reproductive health	Yes
Provider-initiated condom promotion in family planning services	Yes

HIV programme coverage and outcomes

ADOLESCENT GIRLS, YOUNG WOMEN & MALE PARTNERS

Condom use with a non-regular partner among young people 15-24 years old (%)

48 (Young women), 61 (Young men) | Target 90%

Received two prevention interventions in past 3 months (%)

77

Condom use among young women is very low. Coverage of high-incidence locations with dedicated prevention programmes is not being assessed.

id

KEY POPULATIONS

Sex workers: 76 (Sex workers), 42 (Clients) | Target 95%

Gay men and other men who have sex with men (MSM): 75 | Target 90%

People who inject drugs (PWID): 16 | Target 95%

Use of safe injecting equipment is not known and coverage of opioid substitution therapy is not known. Coverage of prevention programmes for people who inject drugs is very low.

2

CONDOM PROGRAMMING

Condom use with a non-regular partner, 15-49 years (%)

37 (Women), 50 (Men) | Target 90%

Estimated condom distribution need met (%)

28

Condom use is very low among people with non-regular partners. The proportion of the total condom distribution need met is very low.

4

VOLUNTARY MEDICAL MALE CIRCUMCISION

Uptake of voluntary medical male circumcision

96 | Target 90%

% of annual voluntary medical male circumcision target achieved

na

The country is not among the 15 priority countries for voluntary medical male circumcision.

ANTIRETROVIRAL DRUG-BASED PREVENTION

Pre-exposure prophylaxis: 100 (2018), 439 (2020) | +339%

Antiretroviral treatment: 57 (Women), 43 (Men) | Target 73%

Antiretroviral treatment coverage: Overall 63%, Sex workers 22%, MSM 10%, PWID 1%

3

As of quarter 3 of 2020, there were 439 people actively taking PrEP. In the past 12 months, use of PrEP increased very rapidly.

Scores (1-10) ● Very good ● Good ● Medium ● Low ● Very low id ... insufficient data na ... not applicable

Implementation of Prevention 2020 Roadmap
