The number of adults newly infected with HIV declined from 4700 in 2010 to 4000 in 2019, a 14% decline.

**HIV programme coverage and outcomes**

**Antiretroviral drug-based prevention**

**Pre-exposure prophylaxis (PrEP)**

- Number of people actively taking PrEP in users of PrEP
- Annual change (2019–20) in users of PrEP
- Antiretroviral treatment
- Antiretroviral treatment coverage

**Implemented Prevention 2020 Roadmap**

1. HIV prevention needs assessment
2. HIV prevention targets
3. HIV prevention strategy
4. Legal and policy reform
5a. Key population size estimates
5b. Defined key population package
6c. Adolescent girls and young women size estimates
6d. Adolescent girls and young women package
7. Capacity development and technical assistance plan
8. HIV prevention financial gap analysis
9. Strengthen programme monitoring
10. Performance review

**HIV prevention adaptations during COVID-19**

- Safe continuation of outreach
- Online counselling
- Condoms
- PreP
- HIV treatment
- Safe injecting equipment

**Linkages between HIV and sexual and reproductive health services**

- HIV testing services integrated within sexual and reproductive health
- Provider-initiated condom promotion in family planning services

**Policy and structural barriers**

**Key populations**

- Criminalization of the behaviour of key populations
- The national strategy includes critical elements of the programme package for key populations
- Avoided health care because of stigma and discrimination

**Adolescent girls and young women**

- Proportion of women who experienced intimate partner violence
- Girls who completed lower secondary education
- Policies on life skills-based HIV and sexuality education (secondary schools)
- Laws requiring parental consent for adolescents to access sexual and reproductive health services

**Implementation of Prevention 2020 Roadmap**

**Scopes (1–18)**

- Very good
- Good
- Medium
- Low
- Very low
- Insufficient data
- Not applicable

**Number of new HIV infections (215 years)**

- Adults (15 years)
- Young women (15–24 years)
- Sex workers
- Gay men and other men who have sex with men (MSM)
- People who inject drugs (PWID)

**HIV prevalence**

- Young women (15–24 years)
- Sex workers
- Gay men and other men who have sex with men
- People who inject drugs

**HIV prevalence in past 3 months (%)**

- Condom use at last paid sex
- Use of harm reduction services

**Use of harm reduction services (%)**

- Data sources: UNAIDS 2020 HIV estimates; Global AIDS Monitoring 2020; Global HIV Prevention Coalition/progress survey 2020; and ICF – the DHS Program STATcompiler.

**HIV programme coverage and outcomes**

- Coverage of opioid substitution therapy is low.
- Injection drug use is low.
- Antiretroviral treatment coverage among key populations is very low.

**Rejected two prevention interventions in past 3 months (%)**

- PWID
- MSM
- Sex workers
- People who inject drugs

**Rejected two prevention interventions in past 3 months (%)**

- PWID
- MSM
- Sex workers
- People who inject drugs

**Condoms**

- Use of safe injecting equipment is low and inadequate.

**Opioid substitution therapy**

- Levels of support and trade-off vary in overall.
- Based on limited available data, treatment coverage among key populations is very low.
