The number of people newly infected with HIV declined from 110 000 in 2010 to 80 000 in 2020, a 26% decline.

HIV prevalence
- Young women 15-24 years
- Young men 15-24 years
- Sex workers
- Gay men and other men who have sex with men
- People who inject drugs
- Women
- Men

HIV programme coverage and outcomes
- Condom use at last anal sex (%)
- Condom use at last sex with a non-regular partner, 15–49 years (%)
- Use of high incidence prevention interventions
- Clear of genital ulcers
- People injected drugs
- People who inject drugs
- People who received PrEP
- People with suppressed viral loads
- Number of new child infections due to vertical transmission (2020)

Prevention of vertical transmission of HIV
- Proportion of women who received antiretroviral therapy during pregnancy or breastfeeding
- Proportion of women who received opioid substitution therapy
- Proportion of women who received counselling

HIV prevention adaptations during COVID-19
- Condoms
- PrEP
- HIV treatment
- Safe injecting equipment
- Opioid substitution therapy

Findings
- Levels of suppressed viral loads are high overall.
- The number of people newly infected with HIV has declined significantly.
- Condom use among young women is very low.

Key populations
- Sex workers
- Gay men & other MSM
- People who inject drugs
- Transgender people
- Prisoners

Policy and structural barriers
- Criminalization of the behaviour of key populations
- The national strategy includes critical elements of the programme package for key populations
- Avoided health care because of stigma and discrimination
- Population size

Adolescent girls and young women
- Proportion of women who experienced intimate partner violence
- Girls who completed lower secondary education
- Policies on life and skills-based HIV and sexuality education (secondary schools)
- Laws requiring parental consent for adolescents to access HIV testing services, age of consent

HIV prevention adaptations
- Safe continuation of outreach
- Online counselling
- Expanded alternative access

Linkages between HIV and sexual and reproductive health services
- HIV testing services integrated within sexual and reproductive health
- Provider-initiated condom promotion integrated into sexual and reproductive health services

The country is not among the 15 priority countries for voluntary medical male circumcision.

Notes
- ‘Yes’ refers to the adaptation having been introduced (not necessarily being currently applied).
